To: daguirre@mt.gov

Dave -

The first NSPS OOOO well completion notification we've received. Are you the one to whom I should forward?

Thanks,
Cindy Beeler

Mark -

FYI - here are ~4 well completion notifications that Oxy sent in as required by NSPS OOOO.

Beginning on October 15, 2012, gas well completion notification provisions under the agency's April 2012 oil and gas standards take effect. Companies can meet this provision by complying with state advance notification requirements. If a state does not have an advance notification requirement, companies must inform EPA no later than two days before the well completion using hydraulic fracturing begins. Companies may submit this notification electronically or in writing. EPA finalized this common-sense approach after receiving important feedback from industry, states, and others during the 100-day open and transparent public comment period. Companies have until 2015 to meet the green completion requirements in the final rule.

In this case, Oxy went ahead and not only submitted notification to COGCC as they have been doing, but also forwarded on those notifications to us (via R8wellCompletion@epa.gov).
